

## World Flag Project 1996

The World Flag is a symbol of Earth and its inhabitants living in harmony. It is meant to serve as an identification and to express the belief that the citizens of this planet can live together in peace. It will also serve as an invitation for understanding from whom or whatever else exists in the universe.

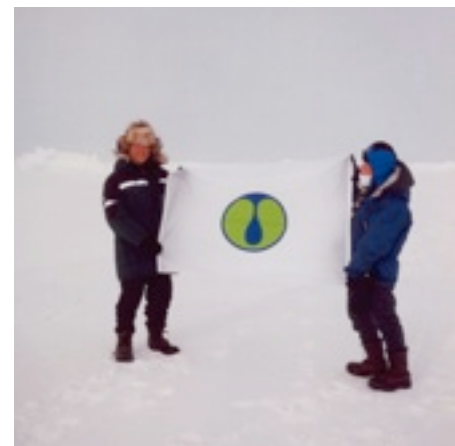

I surmise that before the next millennium, interaction between humans and beings from other worlds will be commonplace and the belief that we are alone will be remembered as much as the earth is flat.

The imagery represents life on earth and the recognition of prosperity through unity seen in a telescopic view of earth and a microscopic one of procreation.
